

Peter Paul Ungab

Software Engineer · Full-Stack Developer

Digos City, Davao del Sur, Philippines

peterpaulungab00@gmail.com

github.com/PeterUngab34 · peterungab34.github.io

SUMMARY

Computer Engineering student who designs, builds, tests, and ships full-stack software end to end: React/Node.js/MongoDB web apps, a Java/MySQL desktop system, and vanilla-JavaScript tools — all open source, deployed, and backed by 149 automated tests. Seeking internships and junior software engineering roles where I can write clean, maintainable code and keep learning.

EDUCATION

Bachelor of Science in Computer Engineering · Cor Jesu College, Digos City

Expected graduation: 2028

Relevant coursework: Programming, Data Structures and Algorithms, Object-Oriented Programming, Database Systems, Web Development, Computer Networks, Software Engineering, Digital Logic, Computer Architecture.

TECHNICAL SKILLS

Languages	JavaScript, Python, Java, C++, C, SQL
Front-End	HTML5, CSS3, React, Vite, Bootstrap, Tailwind CSS, responsive & accessible UI
Back-End	Node.js, Express.js, Socket.IO, REST APIs, JWT authentication, input validation, rate limiting
Databases	MySQL, PostgreSQL, MongoDB (Mongoose), SQLite, relational schema design, JDBC
Tools	Git, GitHub, GitHub Actions (CI/CD), VS Code, Postman, Maven, JUnit 5, Node test runner

PROJECTS

Lumora — E-Commerce Website · React, Node.js, Express, MongoDB, JWT

[Live demo](#) · [Source](#)

- Full-stack online store: product catalog with search, category/price filters, sorting and pagination; persistent cart; validated checkout; order history.
- REST API with Express and Mongoose where order totals and stock are computed server-side, so client-supplied prices are never trusted.
- JWT authentication with bcrypt password hashing, Helmet and rate limiting; 25 automated API tests; automated deployment with GitHub Actions.

Parley — Real-Time Chat Application · React, Node.js, Express, Socket.IO, MongoDB

[Live demo](#) · [Source](#)

- Real-time messaging over WebSockets with chat rooms, online presence, typing indicators, unread badges, and paginated message history in MongoDB.
- Server-side validation and per-socket rate limiting; 22 integration tests using real socket clients, run in CI on every push.

Student Management System · Java, Swing, JDBC, MySQL, JUnit 5

[Download](#) · [Source](#)

- Desktop application for student records, courses, enrollments and grades on a normalized MySQL schema (foreign keys, constraints, indexes) with an embedded H2 fallback.
- Live search, filter and sort with parameterized JDBC queries; unit-weighted GPA on the Philippine 1.00–5.00 scale; CSV export; 73 unit tests; Maven build with CI.

TaskFlow — Task Manager · HTML, CSS, JavaScript

[Live demo](#) · [Source](#)

- Task CRUD with undo, priorities, due dates, filters, search and sort, keyboard shortcuts, light/dark themes and LocalStorage persistence; 29 automated browser tests.

Personal Portfolio Website · HTML, CSS, JavaScript

peterungab34.github.io

- Data-driven, accessible, SEO-optimized portfolio with light/dark themes, a live GitHub repositories integration, and a working contact form.

EXPERIENCE

Independent Software Developer · Personal open-source projects

2025 – Present

- Designed, built, tested and deployed the five applications above from planning to production; managed source with Git/GitHub and automated tests and deployments with GitHub Actions.

Academic Software Projects · Cor Jesu College

2024 – Present

- Course projects in Java, C++, Python and SQL applying object-oriented design, data structures and relational database design; collaborated in teams using version control.
